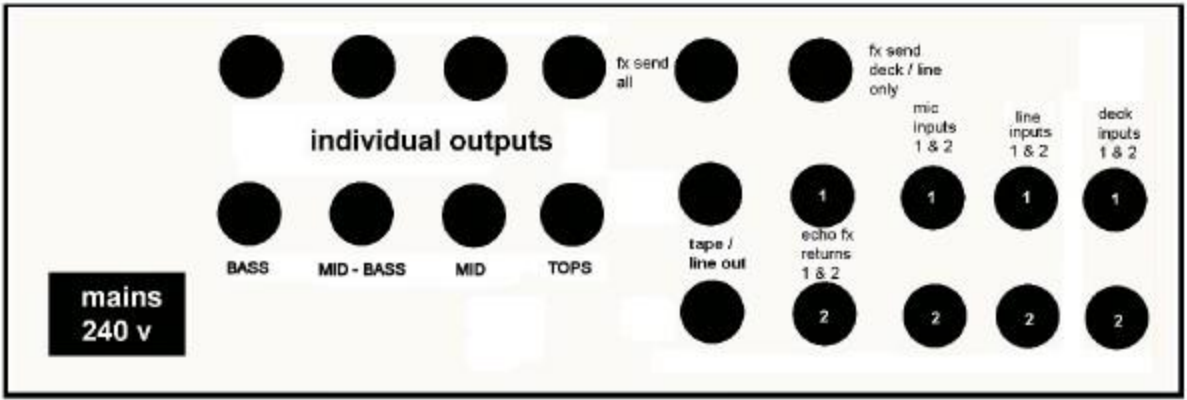
Pre-amp Back Panel Connections



---

this equipment must be earthed !!

---

we do not supply any leads as
we ship to many countries which
have thier own connectors.

---

the seperate outputs are in pairs.
internally they are connected in
parallel, so the same signal is
present at either of each pair.
you can use one of each or both
depending on how you need to
connect to amplifiers.

---

all connections are in MONO.
if connecting other stereo
equipment use stereo to mono
convertors / adaptors.
